

## 20 ft SLC loaded with 22 tonne of fibre cement

The SLC is loaded off the ramp and then pushed up the ramp and into the container.

The 20 ft SLC after having being rolled into the container

## 2 x 20 ft SLC inside a 40 ft container

Two 20 ft SLC's inside a 40 ft container loaded with copper

Having rolled the 11 tonne SLC loaded with copper out of the container upon arrival the LSC is lifted using a 16 tonne forklift directly onto a semi for local delivery.

## 20 ft SLC

20 ft SLC's nested in a container for return. Up to 15, 20 ft SLC's can be returned in a single 20 ft GP.

The above picture shows a 20 ft SLC customised to allow for roller doors to be hung without touching each other. All uprights are stowed in the SLC floor to ensure that the nesting of SLC's is unaffected when returned.
